Spectroscopy of Complex Oxide Interfaces

Claudia Cancellieri 2018-04-09 This book summarizes the most recent and compelling experimental results for complex oxide interfaces. The results of this book were obtained with the cutting-edge photoemission technique at highest energy resolution. Due to their fascinating properties for new-generation electronic devices and the challenge of investigating buried regions, the book chiefly focuses on complex oxide interfaces. The crucial feature of exploring buried interfaces is the use of soft X-ray angle-resolved photoemission spectroscopy (ARPES) operating on the energy

range of a few hundred eV to increase the photoelectron mean free path, enabling the photons to penetrate through the top layers - in contrast to conventional ultraviolet (UV)-ARPES techniques. The results presented here, achieved by different research groups around the world, are summarized in a clearly structured way and discussed in comparison with other photoemission spectroscopy techniques and other oxide materials. They are complemented and supported by the most recent theoretical calculations as well as results of complementary experimental techniques including electron transport and inelastic resonant X-ray scattering.

Local Experiences of Mining in Peru Gerardo Castillo Guzmán 2020-02-05 This book uses a multimethod approach to examine local experience of contemporary mining development in the Peruvian Andes, creating an understanding of the transformations that rural societies experience in this context. Mining is a major component of economic growth in many resource endowed countries, whilst also causing mixed social, cultural, and environmental effects. Most current literature on contemporary mining in Peru is largely focussed on conflict; however, in this text, the author takes a differing approach by examining the experiences of families in the vicinity of Rio Tinto's La Granja exploration copper project, Northern Peru, an area with great significance due to the mining investment and development, which has taken place over the past 25 years. The book first

provides a critical discussion about production of space theories, and debates on spatial mobility, highlighting their relevance to understanding large-scale mining developments, especially in the Peruvian Andes. The following chapters analyze spatial transformations mining development has prompted, focusing on four axes: access to space, production, mobility, and representations of space. A comprehensive narrative is constructed drawing on diverse voices and perspectives, including those of family heads and their partners, local leaders, company employees, and social scientists. The book concludes by discussing how the findings challenge some of the current accounts of the social effects of mining development on rural communities and pose significant implications for sustainable development programs and place-based practices. By taking an interdisciplinary approach, this book will appeal to a wide audience including geographers, social anthropologists, and social scientists interested in the social effects of mining as well as researchers interested in current Latin American Studies and Rural Development.

**Riding in the Zone** Ken Condon 2019-10-15 *Riding motorcycles* is fun, but author Ken Condon maintains that there is a state of consciousness to be achieved beyond the simple pleasure of riding down the road. *Riding in the Zone* helps riders find that state of being. It's the experience of being physically and mentally present in the moment, where every sense is sharply attuned to the ride. Your mind becomes silent to the chatter of daily life, and everyday problems seem to dissolve. You feel a deeper appreciation for life. Your body responds to this state of being with precise, fluid movements, you feel in balance, your muscles are relaxed, and it seems as though every input you make is an

expression of mastery. This is "the Zone." Condon identifies all of the factors that affect entering the Zone and addresses each one individually, from the development of awareness and mental skills to mastering physical control of the motorcycle. At the end of each chapter are drills designed to transform the book's ideas into solid, practical riding skills. Riding in the Zone takes riders to the next level in their skill set.

**Why We Remake** LAUREN. ROSEWARNE

2022-08-29 This examination of film and television remakes focuses explicitly on why - since the dawn of cinema - studios have remade films over and over again. Each chapter provides insight into the business of Hollywood, the motivations of filmmakers and also the pleasures for audiences, and offers a separate explanation for the whys of remaking. Utilizing an interdisciplinary approach, the author draws from existing literature, close readings of films and a dataset of hundreds of film reviews, to provide a taxonomy and deep-dive into six unique rationales for remaking premade titles: the better remake the economic remake the nostalgic remake the Americanized remake the creative remake the fashionable remake. This unique examination of the industrial activity of remaking will be of great interest to academics and students working in the areas of film and adaptation studies, narrative, media discourse, transmedia storytelling, American cinema and cultural studies.

Biotechnology Fundamentals Third Edition

Firdos Alam Khan 2020-03-04 After successful launching of first and second editions of *Biotechnology Fundamentals*, we thought let us find out the feedbacks from our esteemed readers, faculty members, and students about their experiences and after receiving their suggestions and recommendation we thought it would be great idea to write 3rd edition of the book. Being a teacher of biotechnology, I always wanted a book which covers all aspects of biotechnology, right from basics to applied and industrial levels. In our previous editions, we have included all topics of biotechnology which are important and fundamentals for students learning. One of the important highlights of the book that it has dedicated chapter for the career aspects of biotechnology and you may agree that many students eager to know what are career prospects they have in biotechnology. There are a great number of textbooks available that deal with molecular biotechnology, microbial biotechnology, industrial biotechnology, agricultural biotechnology, medical biotechnology, or animal biotechnology independently; however, there is not a single book available that deals with all aspects of biotechnology in one book. Today the field of biotechnology is moving with lightening speed. It becomes very important to keep track of all those new information which affect the biotechnology field directly or indirectly. In this book, I have tried to include all the topics which are directly or indirectly related to fields of biotechnology. The book discusses both conventional and modern aspects of biotechnology with suitable examples and gives the impression that the field of biotechnology is there for ages with different names; you may call them plant breeding, cheese making, in vitro fertilization, alcohol fermentation is all the fruits of biotechnology. The primary aim of this book is to help the students to learn biotechnology with classical and modern approaches and take them

from basic information to complex topics. There is a total of 21 chapters in this textbook covering topics ranging from an introduction to biotechnology, genes to genomics, protein to proteomics, recombinant DNA technology, microbial biotechnology, agricultural biotechnology, animal biotechnology, environmental biotechnology, medical biotechnology, nanobiotechnology, product development in biotechnology, industrial biotechnology, forensic science, regenerative medicine, biosimilars, synthetic biology, biomedical engineering, computational biology, ethics in biotechnology, careers in biotechnology, and laboratory tutorials. All chapters begin with a brief summary followed by text with suitable examples. Each chapter illustrated by simple line diagrams, pictures, and tables. Each chapter concludes with a question session, assignment, and field trip information. I have included laboratory tutorials as a separate chapter to expose the students to various laboratory techniques and laboratory protocols. This practical information would be an added advantage to the students while they learn the theoretical aspects of biotechnology.

Toyota Production System Y. Monden

2012-12-06 The Just-in-time (JIT) manufacturing system is an internal system in use by its founder, Toyota Motor Corporation, but it has taken on a new look. *Toyota Production System, Second Edition* systematically describes the changes that have occurred to the most efficient production system in use today. Since the publication of the first edition of this book in 1983, Toyota has integrated JIT with computer integrated manufacturing technology and a strategic information system. The JIT goal of producing the necessary items in the necessary quantity at the necessary time is an internal driver of production and operations management. The addition of computer integrated technology (including expert systems by artificial intelligence) and information systems technology serve to further reduce costs, increase quality, and improve lead time. The new Toyota production system considers how to adapt production schedules to the

demand changes in the marketplace while satisfying the goals of low cost, high quality, and timely delivery. The first edition of this book, *Toyota Production System*, published in 1983, is the basis for this book. It was translated into many languages including Spanish, Russian, Italian, Japanese, etc., and has played a definite role in inspiring production management systems throughout the world.

The Public Affairs Faculty Manual Bruce D.

McDonald III 2020-02-26 While public affairs faculty study administration and management techniques, few administrators of public affairs programs receive formal training in the nuts and bolts of academic administration. Even those faculty who come to academia after distinguished careers in managerial positions may not be ready for the very different (and difficult) environment of university administration. The Public Affairs Faculty Manual argues that public affairs as a field needs to ensure that knowledge about administration and management is applied to the running of its academic programs, and brings together major leaders in the discipline to explore key features of academic administration. Many of these leaders have served as Master of Public Administration (MPA) directors, chairs, and deans at the nation's top public affairs programs. Crucial issues of academic administration discussed include the basics of public affairs programs, models of governance, roles of different administrative leaders, planning and budgeting for programs, navigating the accreditation process, assessing and improving student learning, ensuring social equity and cultural competency, mentoring faculty, developing curriculum, and helping provide service and applied research to community partners. Contributors have served as MPA directors, chairs, and deans at the nation's top public affairs programs. Themes running throughout the book's chapters are examined, and additional resources to help manage public affairs programs are offered. This collection of essays and the strategies within it are designed to encourage faculty to assume

positions of leadership in their programs and manage those programs in an effective, efficient, and fair manner. The Public Affairs Faculty Manual is required reading for new, seasoned, and aspiring academic administrators in public administration, public policy, and nonprofit management programs, as well as schools of government.
